

FASTSECUREBACKUP!

Preserve Critical Data

Protect Your Business or Career with Secure Data Backup

In this digital world, you are your data. Your work, your play, your future, and much of your past rely on the electronic impulses that comprise the data stored on your servers and/or personal computer. Mission critical data...fragile and transient digital impulses...it's a recipe for disaster.

Whether from malicious or unintelligent acts; accidental, unintentional, or natural events; or a system failure, digital content can disappear fast...and forever.

Backup data, sure.

Tell me something I don't know.

OK, did you know that FASTSECUREBACKUP! has an offsite data loss prevention solution is:

- **More reliable** than in-house backup implementations
- **Cost effective** – from a single PC to a large data center
- **Simple** to deploy and seamless in use
- **Continuous** – data is backed up on the fly to 100 restore points per day
- **Secure** and safe from power outages, natural disasters, thefts, and malicious damage
- **Convenient** – backups are automatic and fast; only changed data uploads between restores

Why online backup? We know: external hard disks and backup software are cheap.

However, for some people – and all businesses – the ideal backup system is located in a different geographic region, immune from the same events that could wipe out your systems, including theft, natural disaster, and sabotage.

Still, we understand cheap. FASTSECUREBACKUP! leverages the economies and efficiencies of backing up thousands of computers to offer cost effective service plans for every budget. Our competitive solution scales to your current and future needs. The next generation of backup solutions is a better solution and a no-brainer install that delivers ongoing, reliable convenience.

“and we have the data to prove it”

Faster Disaster Recovery

FASTSECUREBACKUP! supports your business with a fault tolerant, highly available storage environment located in a major data center. Technicians are onsite 24/7 to ensure maximum uptime – currently averaging above 99%. Our capability to support your business' growth includes:

Disaster Recovery (DR)

- Bare-metal restore of servers, desktop PCs, and laptops
- Restore specific files/folders
- Browse files/folders using web interface
- Remote disaster recovery
- End-user recovery
- Windows Registry and System state

Continuous Data Protection

- Over 100 recovery points per day
- Disk imaging
- Differential and incremental backups
- Point-in-time snapshots
- End-to-end strong encryption
- Archive unlimited amounts of data and recovery points

How FASTSECUREBACKUP! Works

FASTSECUREBACKUP! is an easy download and install from the company web site. Specify when you want backups to occur – up to 100 times a day – and the software's automated scheduler executes in the background, efficiently and securely. FASTSECUREBACKUP! uses block differential technology to analyse data at the disk level and minimize uploads to only new or modified data. All data is encrypted on your computer before transmission across the Internet to our data centre.

Access to your backed up data is available 24 hours a day, 365 days a year. After logging in to the FASTSECUREBACKUP! client portal, the software displays your data in a standard graphical file and folder tree. View the most recent or archived versions of your files by the date you select. Tools allow you to search and sort stored data. Recover everything, or retrieve individual files selectively as you choose.

FASTSECUREBACKUP! – and we have the data to prove it!

With FASTSECUREBACKUP! You Get:

- Software to load onto your Windows or Linux desktop or server
- 24 hour access to your data using your existing Internet connection
- Off-site secure data storage
- Automated, scheduled data backups
- Back up of multiple versions of your most valuable files
